

WIRELESS AUTHENTICATION MAC OS X LEOPARD SYSTEMS

UCC-EntNet v1.0, 022009

The following instructions and general notes are for MAX OS X users.

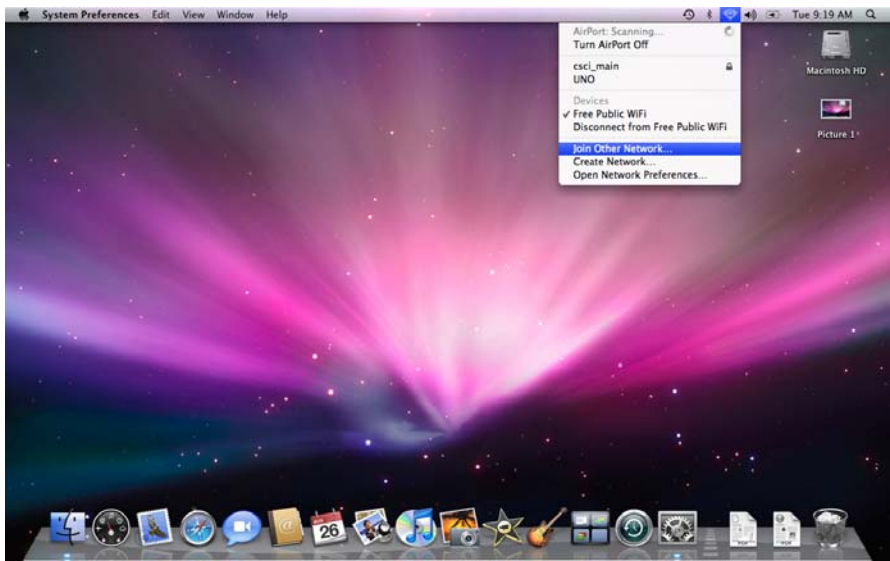

After the setup is completed, you will need to login to the UNO-Domain only for the initial connection. MAC OS X will retain your login credentials and your system will automatically reconnect to the domain every time you connect to the UNO wireless network.

This will remain in effect as long as your UNO account is active or until your password changes at which time you will have to login with the new password.

Since your laptop will connect using your credentials, anyone borrowing your laptop will be identified as you. Please be careful since you are responsible for following all UNO policies regarding the use of the UNO network with your account.

If you have problems call the UNO Help Desk at 280-HELP (4357) for assistance.

1. Click the **Wireless Icon** on the desktop.
2. Select **Join Other Network....**

3. Network Name: **unosecure**
4. Security: **WPA2 Enterprise**

5. Enter UNO User Name.
6. Enter UNO Password.
7. Check **Remember this network.**
8. Click **Join.**

- A window may appear.
9. Click **Continue.**

Another window may appear.

10. Enter UNO User Name.

11. Enter UNO Password.

12. Click **OK**.

The computer should now connect to the UNO Secured Wireless Network with WPA2 Encryption and 802.1x Authentication. If you have problems call the UNO Help Desk at 280-HELP (4357) for assistance.
